

HeatMapImage Documentation

Module name: HeatMapImage
Description: Creates a heat map from a dataset
Author: Joshua Gould (Broad Institute) gp-help@broad.mit.edu
Date: March 10, 2005
Release: 2

Creates a jpeg, png, tiff, or bmp heat map image or eps (encapsulated postscript) file from a dataset.

Parameters:

Name	Description	Choices
input.filename	The input file containing the dataset	
output.file	The output file name	
output.file.format	The output file format	jpeg, bmp, png, tiff, eps
column.size	The size in pixels of an element along the x axis	
row.size	The size in pixels of an element along the y axis	
normalization	The normalization for expression values	row, none
grid	Whether to draw a grid between elements	yes, no
grid.color	The grid color (r:g:b triplet)	
row.annotations	Whether to draw row annotations	yes, no
row.names	Whether to draw row names	yes, no

Return Value:

1. The heat map image file.

Platform dependencies:

Task type: Image Creators
CPU type: any
OS: any
Language: Java
Java JVM level: 1.4
